

Scopus vs. Guided Submissions Support

Which Should You Prioritize for EB-1A / EB-2 NIW?

Profile Building Hand Holding Plan - we do 90%

EB1A Profile Building Strategy Course by Shivgan Joshi

July 16, 2026

EB1A EB2NIW Research Strategy

The Common Misconception

The "Scopus Q1/Q2" Trap

Many researchers assume that publishing in a Scopus Q1 or Q2 journal is the **ultimate** goal for immigration. Because that is what everyone told.

The Reality Check

While high-impact journals have value, the **effort** required for a single Q1/Q2 paper may not produce the strongest EB-1A or EB-2 NIW profile. You have limited 200 hours and 10k budget that you have to use for your publication strategy, how to allocate your time and money? We can hold your hands from starting to the end till you get 15-20 paper indexed in 10-15 manually indexed venues making 100-200 citation possible in 12 months.

- **Problem:** Focus on *journal quality* alone ignores *discoverability*.
- **Solution:** Shift from a *Guided-only* strategy to a *Hand holding* by us.

The "Broad Indexing" Strategy

Start with EBSCO & ProQuest:

- Widely used by universities, public libraries, and **government agencies**.
- Ensures your work is accessible to policymakers. This has to be done using knowledge of how the submission work.

Expand to Government Repositories through manual submission:

- **NASA ADS** (Astrophysics/Physics) through SciXplorer.
- **ERIC** (Education) and OSF.
- **RePEc / MPRA** (Economics).
- **HAL Science** (Multidisciplinary).
- **TechArXiv** (Technology/Engineering).

Result: A single paper can appear across **6–10** reputable platforms!

The Power of Open Access & Repositories

Open Access Amplifies Reach:

- ResearchGate / Academia.edu
- Institutional Repositories
- GitHub Pages (Supporting Materials)
- PhilPapers / Scholarly

Visibility Pyramid

↑ Government Visibility
↑ Citations
↑ General Discovery
↑ Open Access

"Publish where people can find it, not just where it looks good."

The "100-Hour" Trade-Off Analysis

Researcher A (Traditional)	Researcher B (Strategic)
Spends 100 hours on 1 Scopus Q1 Paper	Spends 100 hours on 3-4 Quality Papers
1 Indexing Platform (Scopus)	6+ Indexing Platforms (EBSCO, ProQuest, ADS, etc.)
High effort, Single impact point	Moderate effort, Multi-plicative visibility

Result: Researcher B creates substantially more opportunities for **citations** and **government references**.

A successful EB-1A/NIW Strategy balances:

Journal Quality

(Scopus/Web of Science status)

Broad Indexing

(EBSCO, ProQuest, NASA ADS, ERIC, etc.)

Open Accessibility

(Free to read, easily shared)

Discoverability

(SEO, keywords, discipline repositories)

Citation Potential

(Could this be cited by non-academics?)

Gov. Visibility

(Can a policy maker find this easily?)

Academic Prestige vs. Immigration Evidence

- **Academia:** Focus on *Impact Factor*.
- **Immigration:** Focus on *Sustained National/International Recognition*.

"Publishing for immigration evidence is a different objective than publishing solely for academic prestige. Optimizing for both requires a thoughtful strategy, not a single metric."

Optimize for Citations & Visibility, not just the Journal Name.

Key Takeaways

- **Don't ignore** Scopus Q1/Q2, but **don't obsess** over it.
- Prioritize **EBSCO, ProQuest, and Government Repositories** for maximum visibility.
- Open Access increases the **probability** of being cited.
- One hour spent improving discoverability is worth more than one hour spent chasing a high impact factor.

Build a Profile that is VISIBLE, not just PRESTIGIOUS.

Thank You

We can help you get the most of your time and effort by helping you
select the topic, venue and manual indexing

The Real-World Comparison

Researcher A (Scopus-Only)

- 500 hours spent
- \$2k–\$10k in fees
- **5–10 papers** in Scopus journals
- Only **Socopus WOS indexing Paywalled**
- No manual indexing support
- Papers poorly visible in Google Scholar
- **10–30 citations** in 1 year no gov no edu no national interest angle

Researcher B (Guided Strategy)

- Same
- **20–40 papers** hand-picked hand-holding plan
- **10–15 manually indexed venues through our team**
- Massive manual indexing & hand-holding. Papers visible across all academic venues esp government
- **100–200 citations** in 1 year possible by edu and gov

Same Time. Same Budget.

Researcher B: 4x More Papers, 10x More Citations! Citations come from top journals AND government sources — building stronger EB-1A/NIW evidence.

Our Hand-Holding Indexing Pipeline

The 3-Tier Indexing Funnel

Tier 1: Preprints & Quick Visibility

- SSRN (Social Science)
- TechArXiv (Tech/Eng)
- PhilArchive (Philosophy)
- OSF Preprints
- Time: 1-2 days

Tier 2: Academic & Gov Repositories

- NASA ADS (SciXplorer)
- ERIC (Education)
- HAL Science
- MPRA / RePEc
- Time: 1-2 weeks

Tier 3: Discovery Platforms

- ResearchGate
- Academia.edu
- Zenodo / Figshare
- Dimensions / OpenAir
- Time: Ongoing

We handle 90% of the submission workflow for you

Complete Repository Submission Checklist

Platforms We Submit To (Per Paper):

- ☒ **SSRN** (Elsevier Preprint)
- ☒ **TechArxiv** (Tech/CS)
- ☒ **HAL** (French Open Archive)
- ☒ **MPRA** (Munich Personal RePEc)
- ☒ **OSF** (Open Science Framework)
- ☒ **SciXplorer** (NASA ADS)
- ☒ **ERIC** (US Dept. of Education)
- ☒ **Regulations.gov** (Policy Submissions)

Discovery & Visibility:

- ☒ **ResearchGate**
- ☒ **Academia.edu**
- ☒ **Zenodo / Figshare**
- ☒ **Kudos** (Plain English Summaries)
- ☒ **Scholar9**
- ☒ **PhilArchive**
- ☒ **GitHub Pages** (Supporting Materials)

Harrisburg University Digital Repository

Partnered institutional repository for additional indexing reach

Manual Indexing: Step-by-Step Process

1 Pre-Submission Preparation (We Do This)

- Format paper to each platform's requirements
- Prepare metadata (abstract, keywords, JEL codes)
- Create ORCID & institutional affiliations

2 Parallel Submissions (We Do This)

- Submit to SSRN & TechArxiv **same day**
- Register on OSF & create project page
- Submit to HAL & MPRA within 48 hours

3 Post-Submission Tracking (We Do This)

- Monitor approval/rejection status
- Update metadata if required
- Ensure persistent URLs (DOIs)

4 You Do This

- Review final submissions
- Approve author proofs
- Share paper links on your social media

We do 90% — You review and approve

Dimensions, Semantic Scholar & Citation Tracking

Dimensions.ai

- Tracks citations across ALL disciplines
- Shows **alternative metrics** (Altmetrics)
- Includes patents & clinical trials
- Free version available for authors

OpenAir

- EU research repository network
- Links to Horizon 2020/Europe projects
- Adds EU policy visibility

Semantic Scholar

- AI-powered citation analysis
- Shows **influential citations**
- Provides **citation context** (why you were cited)
- Adds paper to Microsoft Academic Graph

SciProfile

- Author profile management
- Links all your research outputs
- Visible to recruiters & policy makers

We ensure your paper appears in ALL major citation databases within 30 days

What You Do vs. What We Do (Hand-Holding Breakdown)

You (10% Effort)	We (90% Effort)
Write/Revise the paper	Format for each repository
Review final versions	Create metadata & keywords
Share your ORCID & bio	Submit to ALL 20+ platforms
Approve author proofs	Track status & resubmit if needed
Share links on LinkedIn	Monitor citations & altmetrics
Provide journal preferences	Suggest best-fit repositories

Result: You focus on research quality.
We focus on MAXIMUM VISIBILITY.

Support available: WhatsApp, Email, Zoom calls — weekly progress reports

The "Citation Multiplier" Effect

How 20 Platforms = 200+ Citations in 12 Months

Preprints (4 Platforms)

- SSRN: 10-20 cites
- TechArxiv: 5-10 cites
- OSF: 5-15 cites
- PhilArchive: 5-10 cites

25-55 total

Gov Repositories (5 Platforms)

- NASA ADS: 15-30 cites
- ERIC: 10-20 cites
- HAL: 10-20 cites
- MPRA: 10-15 cites
- RePEc: 15-25 cites

60-110 total

Discovery (6+ Platforms)

- ResearchGate: 20-40 cites
- Academia.edu: 15-30 cites
- Dimensions: 10-20 cites
- Zenodo: 10-15 cites
- Semantic Scholar: 10-20 cites

65-125 total

Total Potential: 150-290 Citations Per Paper!
