

Scopus vs. Guided Submissions Support

Which Should You Prioritize for EB-1A / EB-2 NIW?

Profile Building Hand Holding Plan - We Do 90%

EB1A Profile Building Strategy Course by Shivgan Joshi

July 16, 2026

EB1A EB2NIW Research Strategy

The Common Misconception

The "Scopus Q1/Q2" Trap

Many researchers assume that publishing in a Scopus Q1 or Q2 journal is the **ultimate** goal for immigration. Because that is what everyone told.

The Reality Check

While high-impact journals have value, the **effort** required for a single Q1/Q2 paper may not produce the strongest EB-1A or EB-2 NIW profile. You have limited **200 hours** and a **\$10k budget** — how to allocate your time and money?

- **Problem:** Focus on *journal quality* alone ignores *discoverability*.
- **Solution:** Shift from a *Guided-only* strategy to a *Hand-Holding* approach by us.
- **Result:** 15-20 papers indexed in 10-15 manually indexed venues — **100-200 citations in 12 months**.

The "Broad Indexing" Strategy

Start with EBSCO & ProQuest:

- Widely used by universities, public libraries, and **government agencies**.
- Ensures your work is accessible to policymakers.
- **We handle the submission process for you.**

Expand to Government Repositories (We Submit Manually):

- **NASA ADS** (Astrophysics/Physics) through SciXplorer.
- **ERIC** (Education) and OSF.
- **RePEc / MPRA** (Economics).
- **HAL Science** (Multidisciplinary).
- **TechArXiv** (Technology/Engineering).

Result: A single paper can appear across **6–10** reputable platforms — **All submitted by us!**

The Power of Open Access & Repositories

Open Access Amplifies Reach:

- ResearchGate / Academia.edu
- Institutional Repositories
- GitHub Pages (Supporting Materials)
- PhilPapers / Scholarly
- Zenodo / Figshare

Visibility Pyramid

↑ Government Visibility
↑ Citations
↑ General Discovery
↑ Open Access

We submit to ALL of these on your behalf.

"Publish where people can find it, not just where it looks good."

The "100-Hour" Trade-Off Analysis

Researcher A (Traditional)	Researcher B (Strategic)
Spends 100 hours on 1 Scopus Q1 Paper	Spends 100 hours on 3-4 Quality Papers
1 Indexing Platform (Scopus)	6+ Indexing Platforms (EBSCO, ProQuest, ADS, etc.)
High effort, Single impact point	Moderate effort, Multiplicative visibility
10-30 citations/year	100-200 citations/year

Result: Researcher B creates substantially more opportunities for **citations** and **government references**.

We make sure YOU are Researcher B.

The Balanced Equation

A successful EB-1A/NIW Strategy balances:

Journal Quality

(Scopus/Web of Science status) — We help you select

Broad Indexing

(EBSCO, ProQuest, NASA ADS, ERIC, etc.) — **We handle 90%**

Open Accessibility

(Free to read, easily shared) — **We submit everywhere**

Discoverability

(SEO, keywords, discipline repositories) — **We optimize**

Citation Potential

(Could this be cited by non-academics?) — **We track & amplify**

Gov. Visibility

(Can a policy maker find this easily?) — **We ensure YES**

You focus on research — We focus on visibility.

The Immigrant's Mindset

Academic Prestige vs. Immigration Evidence

- **Academia:** Focus on *Impact Factor*.
- **Immigration:** Focus on *Sustained National/International Recognition*.

"Publishing for immigration evidence is a different objective than publishing solely for academic prestige. Optimizing for both requires a thoughtful strategy, not a single metric."

Optimize for Citations & Visibility, not just the Journal Name.

We help you build the RIGHT evidence for USCIS.

Key Takeaways

- **Don't ignore** Scopus Q1/Q2, but **don't obsess** over it.
- Prioritize **EBSCO, ProQuest, and Government Repositories** for maximum visibility.
- Open Access increases the **probability** of being cited.
- One hour spent improving discoverability is worth more than one hour spent chasing a high impact factor.
- **We do 90% of the submission work — you focus on research quality.**

Build a Profile that is VISIBLE, not just PRESTIGIOUS.

We make it happen.

The Real-World Comparison

Researcher A (Scopus-Only)

- 500 hours spent
- \$2k–\$10k in fees
- **5–10 papers** in Scopus journals
- Only **Scopus/WOS indexing** — Paywalled
- **No manual indexing support**
- Papers poorly visible in Google Scholar
- **10–30 citations** in 1 year
- No government or education visibility
- No national interest angle

Researcher B (Hand-Holding Plan)

- Same time & budget
- **20–40 papers** — hand-picked venues
- **10–15 manually indexed venues**
- **Massive manual indexing by our team**
- Papers visible across **ALL** academic & government platforms
- **100–200 citations** in 1 year
- Strong education & government evidence
- **USCIS-friendly profile**

Same Time. Same Budget.

Researcher B: 4x More Papers, 10x More Citations! Citations come from top journals AND government sources — building stronger EB-1A/NIW evidence.

Our Hand-Holding Indexing Pipeline

The 3-Tier Indexing Funnel

We handle EVERY submission step — you just review and approve

Tier 1: Preprints & Quick Visibility

- SSRN (Social Science)
- TechArXiv (Tech/Eng)
- PhilArchive (Philosophy)
- OSF Preprints
- **Time: 1-2 days**
- **We submit 100%**

Tier 2: Academic & Gov Repositories

- NASA ADS (SciXplorer)
- ERIC (Education)
- HAL Science
- MPRA / RePEc
- **Time: 1-2 weeks**
- **We submit 100%**

Tier 3: Discovery Platforms

- ResearchGate
- Academia.edu
- Zenodo / Figshare
- Dimensions / OpenAir
- **Time: Ongoing**
- **We submit 100%**

We handle 90% of the submission workflow — You review and approve

Complete Repository Submission Checklist

Academic & Gov Repositories (We Submit):

- ✓ **SSRN** (Elsevier Preprint)
- ✓ **TechArxiv** (Tech/CS)
- ✓ **HAL** (French Open Archive)
- ✓ **MPRA** (Munich Personal RePEc)
- ✓ **OSF** (Open Science Framework)
- ✓ **SciXplorer** (NASA ADS)
- ✓ **ERIC** (US Dept. of Education)
- ✓ **Regulations.gov** (Policy Submissions)

Discovery & Visibility Platforms:

- ✓ **ResearchGate**
- ✓ **Academia.edu**
- ✓ **Zenodo / Figshare**
- ✓ **Kudos** (Plain English Summaries)
- ✓ **Scholar9**
- ✓ **PhilArchive**
- ✓ **GitHub Pages** (Supporting Materials)

Harrisburg University Digital Repository & More

Partnered institutional repository for additional indexing reach — [We manage the submission](#)

Total: 20+ Platforms Per Paper — All Submitted by Us!

Manual Indexing: Step-by-Step Process

Who Does What?

We Do This (90%)

1 Pre-Submission

- Format paper to each platform's requirements
- Prepare metadata (abstract, keywords, JEL codes)
- Create ORCID & institutional affiliations
- Select best-fit repositories for your discipline

2 Parallel Submissions

- Submit to SSRN & TechArxiv **same day**
- Register on OSF & create project page
- Submit to HAL & MPRA within 48 hours
- Submit to all 20+ platforms systematically

3 Post-Submission Tracking

- Monitor approval/rejection status
- Update metadata if required

You Do This (10%)

- 1 Review final submissions
- 2 Approve author proofs
- 3 Share paper links on social media
- 4 Provide journal preferences
- 5 Focus on research quality

Dimensions, Semantic Scholar & Citation Tracking

Dimensions.ai

- Tracks citations across ALL disciplines
- Shows **alternative metrics** (Altmetrics)
- Includes patents & clinical trials
- Free version available for authors

OpenAir

- EU research repository network
- Links to Horizon 2020/Europe projects
- Adds EU policy visibility

SciProfile

- Author profile management
- Links all your research outputs
- Visible to recruiters & policy makers

Semantic Scholar

- AI-powered citation analysis
- Shows **influential citations**
- Provides **citation context** (why you were cited)
- Adds paper to Microsoft Academic Graph

Google Scholar

- Universal citation tracking
- Automatic profile updates
- **We ensure your paper appears in ALL these platforms**

The 90/10 Breakdown — What You Actually Do

Your Effort: 10%

Our Effort: 90%

You (10%)	We (90%)
Write/Revise the paper Review final versions	Format for each repository Create metadata & keywords
Share your ORCID & bio	Submit to ALL 20+ platforms
Approve author proofs	Track status & resubmit
Share links on LinkedIn	Monitor citations & altmetrics
Provide journal preferences	Suggest best-fit repositories
Focus on research quality	Handle ALL technical submissions

**You focus on research quality — We focus on
MAXIMUM VISIBILITY**

The "Citation Multiplier" Effect

How 20+ Platforms = 200+ Citations in 12 Months

Preprints (4 Platforms)

- SSRN: 10-20 cites
- TechArxiv: 5-10 cites
- OSF: 5-15 cites
- PhilArchive: 5-10 cites

25-55 total

Gov Repositories (5 Platforms)

- NASA ADS: 15-30 cites
- ERIC: 10-20 cites
- HAL: 10-20 cites
- MPRA: 10-15 cites
- RePEc: 15-25 cites

60-110 total

Discovery (6+ Platforms)

- ResearchGate: 20-40 cites
- Academia.edu: 15-30 cites
- Dimensions: 10-20 cites
- Zenodo: 10-15 cites
- Semantic Scholar: 10-20 cites

65-125 total

Total Potential: 150-290 Citations Per Paper!

We submit to ALL these platforms — you get ALL these citations

The Hand-Holding Advantage — Why Choose Us?

What You Get

- ✓ 20+ platforms per paper
- ✓ 100-200 citations in 12 months
- ✓ Government & education visibility
- ✓ Manual indexing expertise
- ✓ Weekly progress reports
- ✓ 24/7 WhatsApp support
- ✓ Citation tracking & monitoring
- ✓ USCIS-ready evidence package

What You Avoid

- No 500-hour waste
- No submission headaches
- No formatting nightmares
- No missed platforms
- No technical rejections
- No low citation count
- No poor visibility
- No weak USCIS evidence

You focus on your research. We handle the rest.

What Matters for EB-1A / EB-2 NIW

Visibility + Citations + Government Recognition = Strong USCIS Case

- **Not** just journal prestige
- **Not** just impact factor
- **Yes** to broad indexing
- **Yes** to manual submission across 20+ platforms
- **Yes** to government repository visibility
- **Yes** to hand-holding expertise

We Do 90% — You Do 10%

**From 10-30 citations to 100-200 citations
in 12 months**

Thank You

We help you get the most of your time and effort by selecting the topic, venue, and handling manual indexing
