

GARP Risk and AI Exam Prep Course

Unofficial Exam Preparation for AI in Risk Management

Unofficial Course Notes

6 hours of video content
+ PDF notes, question banks, and tutorials

September 27, 2026

Outline

- 1 Intended Learners
- 2 Curriculum
- 3 Course Landing Page
- 4 Available PDF Materials
- 5 How to Use This Course
- 6 Disclaimer

Prerequisites and Requirements

- Basic understanding of risk management concepts (helpful but not mandatory)
- Familiarity with statistics and probability at an introductory level
- Basic knowledge of machine learning terminology
- No programming experience required
- A willingness to work through PDF notes, question banks, and tutorials

Intended Learners — Learning Objectives

By the end of this course, you will be able to:

- 1 Explain how artificial intelligence is applied within risk management frameworks.
- 2 Identify and compare key AI and ML tools and techniques.
- 3 Evaluate model performance and estimation methods.
- 4 Describe responsible and ethical AI principles and governance.
- 5 Apply generative AI and NLP concepts to risk use cases.
- 6 Answer exam-style questions across all five modules confidently.

Intended Learners — Who This Course Is For

Primary Audience

- Risk analysts and risk managers
- Data scientists entering risk domains
- AI and ML practitioners in financial services
- Compliance and governance professionals

Secondary Audience

- Students preparing for GARP Risk and AI certification
- Auditors reviewing AI models
- Consultants advising on AI risk
- Anyone curious about AI in risk management

Course Structure

- 6 Sections with 30-40 Lectures
- 6-10 hrs of video content
- Each module includes notes, questions, and tutorials in PDF format
- Aligned with the official GARP Risk and AI curriculum

Note

All lectures have accompanying content. No lecture is left without supporting materials.

Section 1 and 2: Introduction and Module 1

Section 1: Introduction

- Lecture 1: Introduction

Section 2: Module 1 — AI and Risk: Introduction and Overview

- Lecture 2: Module 1 AI and Risk — Introduction and Overview (Preview enabled)
- Lecture 3: Questions — Module 1 AI and Risk — Introduction and Overview

Section 3: Module 2 — Tools and Techniques (Part 1)

Lectures 4 to 10

- Lecture 4: Chapter 1 — Introduction to Tools and Techniques (Preview enabled)
- Lecture 5: Chapter 2 — Unsupervised Learning
- Lecture 6: Chapter 3 — Supervised Learning for Numerical Data
- Lecture 7: Chapter 4 — Decision Trees
- Lecture 8: Chapter 4 — KNN Theory
- Lecture 9: Chapter 5 — Semi-Supervised Learning
- Lecture 10: Chapter 6 — Reinforcement Learning

Section 3: Module 2 — Tools and Techniques (Part 2)

Lectures 11 to 16

- Lecture 11: Chapter 7 — Supervised Learning: Model Estimation
- Lecture 12: Chapter 8 — Supervised Learning: Model Performance
- Lecture 13: Chapter 9 — Natural Language Processing Part 1
- Lecture 14: Chapter 10 — Generative AI Part 1
- Lecture 15: Chapter 10 — Generative AI Part 2
- Lecture 16: Chapter 10 — Generative AI Part 3

Section 4, 5 and 6: Modules 3 to 5

Section 4: Module 3 — Risk and Risk Factors

- Lecture 17: Module 3 — Risk and Risk Factors
- Lecture 18: Questions — Risk and Risk Factors

Section 5: Module 4 — Responsible and Ethical AI

- Lecture 19: Module 4 — Responsible and Ethical AI

Section 6: Module 5 — Data and AI Model Governance

- Lecture 20: Module 5 — Data and AI Model Governance
- Lecture 21: Questions — Data and AI Model Governance

Course Landing Page — Description (200+ words)

Course Description

This unofficial GARP Risk and AI Exam Prep Course is designed for professionals and students who want to master the intersection of artificial intelligence and risk management. Whether you are a risk analyst, data scientist, compliance officer, or AI practitioner, this course provides a structured path through the key concepts, tools, and governance frameworks required by the GARP Risk and AI certification.

The course includes 4 hours and 20 minutes of video content, organized into six sections and twenty-one lectures. You will explore AI and risk fundamentals, supervised and unsupervised learning, decision trees, KNN, semi-supervised learning, reinforcement learning, model estimation, model performance evaluation, natural language processing, and generative AI. Each module is supported by comprehensive PDF notes, question banks, tutorials, and variation materials to reinforce your learning. Beyond technical content, the course covers responsible and ethical AI, data governance, and AI model governance. These are critical topics for anyone deploying AI in regulated environments. You will learn how to evaluate model performance, identify risks, and apply governance frameworks to real-world scenarios.

The course is self-paced, beginner-friendly, and requires no programming experience. All lectures have accompanying content, and the included question PDFs help you test your understanding after each

Course Landing Page — Subtitle, Category, Level

Course Subtitle

Unofficial Exam Preparation for AI in Risk Management

Category

Business — Business Analytics and Intelligence

Level

Intermediate

Subcategory

Risk Management

Primarily Taught

Artificial Intelligence (AI) and Risk Management

Course Image Requirements

- Recommended size: 750 by 422 pixels (16:9 aspect ratio)
- Format: JPG or PNG
- Content: AI and risk visual (neural network, shield, risk charts)
- Text: Avoid too much text; keep it clean and professional
- Branding: Use dark blue and gold to match the course theme

Note

Upload the course image on the Course Landing Page before publishing.

Chapter PDFs (Part 1)

File	Description
Chapter1Introduction.pdf	Introduction to AI and risk
Chapter2UnsupervisedLearning.pdf	Unsupervised learning
Chapter3supervisedLearning_v3.pdf	Supervised learning
Chapter4Techniques.pdf	ML techniques (Part 2)
Chapter4Techniques_notes.pdf	Notes for Chapter 4
Chapter4Techniques_variation.pdf	Variation of Chapter 4
Chapter5SemiSupervisedLearning.pdf	Semi-supervised learning
Chapter5SemiSupervised_notes.pdf	Notes for Chapter 5
Chapter5SemiSupervised_v2.pdf	Version 2 of Chapter 5
Chapter6ReinforcementLearning.pdf	Reinforcement learning
Chapter6RL_tutorial.pdf	RL tutorial
Chapter6RL_tutorial_v2.pdf	Tutorial version 2

Chapter PDFs (Part 2)

File	Description
Chapter6RL_tutorial_v2_part1.pdf	Tutorial v2, Part 1
Chapter6RL_tutorial_part1.pdf	Tutorial Part 1 (2026-09-05)
Chapter6RL_tutorial_part2.pdf	Tutorial Part 2 (2026-09-05)
Chapter7ModelEstimation.pdf	Model estimation
Chapter7ModelEstimation_notes.pdf	Notes for Chapter 7
Chapter7tutorial.pdf	Chapter 7 tutorial
Chapter8PerformanceEvaluation.pdf	Model performance evaluation
Chapter8Performance_notes.pdf	Notes for Chapter 8
Chapter8Performance_variation.pdf	Variation of Chapter 8
Chapter9NLP.pdf	Natural language processing
Chapter9NLP_tutorial.pdf	NLP tutorial

Module PDFs

File	Description
Chapter10Generative.pdf	Generative AI
Chapter10Generative_questions.pdf	Generative AI questions
Module1_notes.pdf	Module 1 notes
Module1_questions.pdf	Module 1 questions
Module3RiskFactors.pdf	Risk and risk factors
Module3RiskFactors_notes.pdf	Module 3 notes
Module3RiskFactors_q.pdf	Module 3 questions
Module4ResponsibleEthicalAI.pdf	Responsible and ethical AI
Module4Responsible_notes.pdf	Module 4 notes
Module4Responsible_q.pdf	Module 4 questions
Module5Governance.pdf	Data and AI governance
Module5Governance_notes.pdf	Module 5 notes
Module5Governance_q.pdf	Module 5 questions

How to Use This Course

- 1 Watch the video lectures in the order listed under each section.
- 2 Read the corresponding PDF notes for each chapter or module.
- 3 Attempt the question PDFs after finishing each module.
- 4 Work through the tutorials for Chapters 6, 7, and 9.
- 5 Review the variation PDFs for alternative explanations.
- 6 Use the 100-slide summary PDF for quick revision before the exam.

Note

The course also includes explanations with question-and-answer sections for selected modules.

Important

- This document is an unofficial study aid.
