

EB2-NIW & EB1A Profile Building

High-Volume Research Strategy: 20-50 Papers | 1000-2000 Citations

Complete DIY Research Profile System

June 7, 2026

20-50 Papers | 1000-2000 Citations | Government Impact Focus

The Target Numbers - What You Need

Publication Targets

- **20-50 total publications** (journals + conferences + book chapters)
- **20-35 review papers** (high citation generators)
- **5-10 conference proceedings** (fast publication)

Citation Targets

- **1000-2000 total Google Scholar citations**
- **1-10 .gov citations** (Federal Reserve, ERIC, Science.gov, BLS, NIH)
- **10-20 .edu citations** (Harvard, MIT, Stanford, Berkeley)
- **h-index: 15-25+**

Why Impact Matters More Than Journal Name

The Truth About Journal Prestige

- A paper in a mid-tier journal with 100 citations > paper in Nature with 0 citations
- USCIS cares about CITATIONS - proof your work is being used
- .gov citations from mid-tier journals = as valuable as top-tier
- Focus on getting your work READ and CITED, not where it appears

Where to Focus Your Energy - gov angle matters the most

- **Content quality:** Solve real problems, address government priorities
- **Distribution:** Upload everywhere (arXiv, SSRN, OSF, ResearchGate)
- **Promotion:** Share on LinkedIn, email to researchers, present at conferences
- **Government alignment:** Topics that federal agencies care about

Government Angle - The Most Important Factor

Why Government Impact Matters Most

- .gov citations are the SINGLE strongest evidence
- Federal agencies cite work that serves national interests
- One .gov citation can outweigh 50 regular citations

Federal Agencies to Target

Agency	Your Research Should Address
Federal Reserve	Financial stability, payment systems, AI in banking
Department of Treasury	Crypto regulation, sanctions, fraud detection
Department of Labor	Workforce development, job training, AI displacement
Department of Education	AI literacy, digital skills, online learning
Department of Homeland Security	Cybersecurity, critical infrastructure
NIH/PubMed	Health AI, medical data, patient safety

50 Papers - The High-Volume Strategy

Why Volume Matters

- More papers = more chances to be cited
- Each paper can generate 20-50 citations over time
- Volume demonstrates sustained research activity
- Manual submission to top indexing: MPRA, EconPaper, SSRN, ERIC, OSF, Sciexplorer

How to Achieve 50 Papers

- **Write review papers:** 10-15 review papers (each cites 100+ refs, gets many citations)
- **Conference papers:** 15-20 conference proceedings (faster publication)
- **Collaborate:** Each collaboration adds 2-3 co-authored papers
- **Extend conference papers:** Conference → extended version → journal
- **Book chapters:** 5-8 invited chapters (editors reach out after you publish)

Review Papers - Your Citation Engine

Why Review Papers Are Critical

- Review papers get 2-5x MORE citations than original research
- Anyone starting research in the field WILL cite your review
- Stay relevant and citable for years
- Can be written without new experiments

How Many Review Papers You Need

- Target: **10-15 review papers**
- Each review paper: 150-300 references cited
- Each review paper: Expected 100-300 citations
- 10 review papers $\times$ 150 citations = 1500 citations

Review Paper Topics (Government Focus)

- "AI in Financial Stability: A Systematic Review" (Federal Reserve)
- "Cybersecurity for Critical Infrastructure" (DHS)
- "Digital Workforce Training: Methods and Outcomes" (DOL)
- "AI Literacy in K-12 Education" (Department of Education)

Rapid Publication Venues - Build Volume Fast

Fastest Publication Options

- **MDPI journals:** Fast submission to publication
- **Elsevier open access:** Rapid turnaround
- **IEEE conferences:** Quick from submission to presentation
- **Springer conference proceedings:** Efficient process

Low-Cost Rapid Journals

- MDPI: Some journals have low APCs or waivers
- Hindawi: Negotiate waivers available
- PeerJ: Tiered pricing options
- Directory of Open Access Journals: Filter by \$0 options

Zero-Cost Publication Strategy

No-Cost Publication Options

- **Traditional subscription journals:** Author pays nothing (IEEE Transactions, many Elsevier subscription journals)
- **University journals:** Many university presses charge no fee
- **Society journals:** IEEE, ACM, INFORMS member rates often \$0
- **Conference proceedings:** Registration only
- **Book chapters:** Usually no fee (invited)
- **Preprints:** Always free (arXiv, SSRN, OSF)

How to Find No-Cost Journals

- 1 Go to Scopus Sources
- 2 Search your field
- 3 Check "Open Access" filter - select "All Open Access"
- 4 Or select "Hybrid" journals (subscription track = no fee)
- 5 Email editor to confirm no fee for subscription track

Conference Proceedings - High-Volume Strategy

Why Conferences for Volume

- Faster than journals
- Lower cost than many journals
- Can publish multiple conference papers
- Easy to extend into journal papers later

Conference Proceedings Indexed in Scopus

- **IEEE Xplore:** All IEEE conferences (strongest)
- **Springer LNCS/LNAI/CCIS:** High-quality proceedings
- **ACM Digital Library:** ACM conferences
- **Elsevier Procedia:** Procedia Computer Science, Procedia Economics
- **CEUR Workshop Proceedings:** Free, Scopus indexed for some

Conference Strategy

- Submit multiple conference papers
- Each conference = 1 publication, 5-20 eventual citations
- Present = networking for collaborations

Collaboration - Force Multiplier for Volume

Why Collaborate

- Each collaboration adds multiple co-authored papers
- You don't have to write everything yourself
- Shared workload = more publications for everyone

How to Find Collaborators

- **ResearchGate:** Message researchers in your field
- **LinkedIn:** Connect with academics and industry researchers
- **Conferences:** Meet potential collaborators in person
- **Twitter/X:** Follow and engage with researchers
- **Former colleagues:** Reach out to past coworkers

Collaboration Structure

- You lead: Write first draft, handle submission (you get first author)
- Partner leads: They write, you contribute (you get co-author)
- Multiple small collaborations = many co-authored papers

Preprints - Citations Before Journal Publication

Why Preprints Are Essential

- Citations start the DAY you upload
- Google Scholar indexes preprints
- Preprints get DOI and become citable immediately
- Can be cited by government reports before journal publication

Where to Upload Every Paper

- 1 **arXiv.org** (Very hard very reputed CS, physics, math, finance)
- 2 **SSRN** (economics, finance, law)
- 3 **OSF Preprints** (interdisciplinary, DOI from OSF)
- 4 **ResearchGate** (upload full text)

Preprint Citation Impact

- Upload to arXiv (or MDPI preprints or SSRN)
- Paper indexed in Google Scholar
- First citation (someone reads your preprint)
- Journal publication (citations already started)
- Many citations from preprint version

.gov Citations - Federal Reserve (FEDS Series)

Targeting Federal Reserve Citations

- Federal Reserve economists read SSRN and arXiv preprints
- Your preprint can be cited BEFORE journal publication
- FEDS papers have DOIs and are .gov domain

Topics That Get Fed Citations

- Machine learning for financial stability monitoring
- Payment systems and FedNow adoption
- Climate risk and financial institutions
- AI in banking supervision and compliance
- Cryptocurrency and digital asset regulation
- Stress testing methodologies

How to Maximize Fed Citation Chance

- 1 Upload to SSRN (Fed economists use SSRN heavily)
- 2 Include "Federal Reserve" or "financial stability" in keywords
- 3 Cite Fed papers in your work (they notice)
- 4 Email your SSRN link to Fed economists

.gov Citations - ERIC (Department of Education)

What is ERIC?

- Education Resources Information Center
- .gov domain of U.S. Department of Education
- Indexes education, workforce, training research

How Papers Get into ERIC

- 1 Publish in ERIC-indexed journal
- 2 Journal automatically sends content to ERIC
- 3 Your paper appears on ERIC with .gov URL
- 4 Your work is discoverable through .gov portal

Topics for ERIC Indexing

- AI literacy and digital skills training
- Workforce development and retraining programs
- Online learning effectiveness research
- Veteran education and job training
- STEM education and diversity
- Community college workforce programs

What is Science.gov?

- Official U.S. government search portal for science
- Searches 60+ federal databases
- Managed by Department of Energy

Pathways to Science.gov

- **PubMed** (NIH) → Science.gov
- **ERIC** (Dept of Education) → Science.gov
- **NASA ADS** → Science.gov
- **DOE OSTI** → Science.gov
- **USDA** → Science.gov

Strategy for Science.gov Indexing

- Publish in PubMed-indexed journals for health/AI topics
- Publish in ERIC-indexed journals for education/workforce
- Upload to DOE OSTI if your research has energy relevance
- Once indexed, your work is searchable on .gov domain

Targeting BLS Citations

- BLS publishes Monthly Labor Review (MLR)
- Also publishes working papers and reports
- Citations from BLS = .gov domain evidence

Topics for BLS Citations

- Employment projections and labor market trends
- Impact of AI on employment and wages
- Workforce demographics and participation rates
- Occupational outlook and skills demand
- Gig economy and alternative work arrangements

How to Get Cited by BLS

- 1 Publish on labor economics topics
- 2 Upload to SSRN (BLS researchers use SSRN)
- 3 Submit comments to BLS RFIs on Regulations.gov
- 4 Cite BLS data in your papers (they notice)

Targeting NIH Citations

- PubMed is .gov domain (nih.gov)
- Citations from NIH-funded research are .gov
- Health-related AI research is high priority

Topics for PubMed Citations

- AI for clinical decision support
- Machine learning for patient safety
- Digital health and telemedicine
- Health data privacy and security
- Medical image analysis
- Public health surveillance

How to Get PubMed Citations

- 1 Publish in PubMed-indexed journals
- 2 Upload to medRxiv preprint server
- 3 Collaborate with NIH-funded researchers
- 4 Focus on health applications of your methods

.edu Citations - Top US Universities

Why .edu Citations Are Valuable

- Verifiable .edu domain
- Demonstrates academic recognition in the U.S.
- Harvard, MIT, Stanford citations are strongest

How to Get .edu Citations

- 1 Publish in reputable journals (Scopus/WoS)
- 2 Upload to institutional repositories (Harvard DASH, MIT DSpace)
- 3 Present at university seminars (virtual or in-person)
- 4 Collaborate with US university researchers
- 5 Create course materials that professors adopt

Tracking .edu Citations

- Search Google Scholar with site:.edu "your paper title"
- Save screenshots of results with .edu URLs
- Document citations from specific universities

EBSCO Host - Massive Academic Reach

What is EBSCO?

- Largest academic database aggregator worldwide
- Serves thousands of universities globally
- Indexes thousands of journals across all disciplines
- Content appears in university library search results

Why EBSCO Citations Matter

- Your paper appears when students & researchers search their university library
- More discoverability = more citations
- Many Scopus-indexed journals are ALSO in EBSCO
- EBSCO discovery services power university search portals

How to Get Indexed in EBSCO

- Publish in journals that EBSCO indexes (check Journal Finder)
- Many low-cost journals are EBSCO-indexed
- EBSCO indexes conference proceedings and book chapters too
- Ask your journal editor: "Is this journal in EBSCO?"

ProQuest - Beyond Traditional Journals

What is ProQuest?

- Major academic database alongside EBSCO
- Indexes dissertations, journals, newspapers, conference papers
- Available in most US university libraries
- ProQuest Central is most widely used

ProQuest Citation Benefits

- Citations from .edu domains via university library access
- Dissertations citing your work = .edu citations
- Conference proceedings indexed in ProQuest get more visibility
- Government reports indexed here too

How to Get into ProQuest

- Conference proceedings often automatically go to ProQuest
- Dissertations that cite you are in PQDT (ProQuest Dissertations)
- Publish in ProQuest-indexed journals
- Upload to institutional repositories (university libraries submit)

Peer Review - Building Recognition

Target: Multiple Peer Reviews

- Start with a few reviews
- Grow to become established reviewer
- Progress to senior reviewer status

How to Get Invited

- 1 Publish papers in a journal (editors notice)
- 2 Register as reviewer on ScholarOne and Editorial Manager
- 3 Email journal editors: "I have published in your journal and am available to review"
- 4 Accept invitations when possible

Review Documentation

- Save all invitation emails
- Save completion confirmations
- Web of Science reviewer profile (automatic tracking)
- ORCID reviewer recognition

Awards - Building Recognition

Award Opportunities

- **Best Paper Awards** at conferences you attend
- **Young Researcher Awards** from professional societies
- **Travel Grants** (award for attending)
- **Outstanding Reviewer Awards** from journals
- **Teaching Awards** from your employer

Awards to Target

- IEEE Outstanding Young Professional
- ACM Student Research Competition
- Conference Best Paper Award
- Journal Outstanding Reviewer Award

Book Chapters - Adding Publication Volume

How to Get Book Chapter Invitations

- Publish journal papers first
- Editors of edited volumes will find you on Google Scholar
- They email invitation to contribute a chapter
- Accept invitations when possible

Book Chapter Benefits

- Most book chapters have no publication fee
- Target multiple chapters
- Publishers include Springer, Elsevier, Wiley

Preprint Servers - Every Paper Must Go Here

Upload Every Paper to These Servers

- 1 **arXiv.org** (Very hard, CS, physics, math, finance, statistics)
- 2 **SSRN** (for economics, finance, law, social sciences)
- 3 **OSF Preprints** (for interdisciplinary, gets DOI)
- 4 **ResearchGate** (full text upload)

Why This Matters for Citations

- Each server = additional discovery pathway
- Each server = potential new reader = potential citation
- Multiple servers × multiple papers = many distribution points
- Citations start the day you upload

Preprint Citation Evidence for Portfolio

- Screenshot of arXiv/SSRN download counts
- Citation of your preprint in other papers
- Google Scholar shows preprint citations

LinkedIn Strategy for Citations

- Every time a paper is published/posted, share on LinkedIn
- Tag co-authors and relevant researchers
- Use hashtags: #AI #MachineLearning #Cybersecurity #FinTech
- Engage with comments (algorithm boosts visibility)

Results from Consistent LinkedIn Posting

- More downloads when shared on LinkedIn
- More downloads = more citations
- Builds network of researchers who will cite you

Twitter/X - Research Networking

Why Twitter/X for Researchers

- Active academic community (hashtags: #AcademicTwitter, #AI, #MachineLearning)
- Journal editors and conference organizers are on Twitter
- Preprints shared here get more citations

Twitter Strategy

- Share every paper with 1-2 sentence summary
- Use relevant hashtags
- Tag journal/conference account if applicable
- Retweet and engage with other researchers' papers

Zotero - Literature Review at Scale

Why Zotero for 50 Papers

- Each review paper cites 100-300 references
- 10-15 review papers = many references managed
- Zotero organizes everything automatically

Zotero Setup for Volume

- Create collections for each paper
- Use tags for organization
- Install Better BibTeX for LaTeX export
- Use browser connector to save papers instantly

Literature Review Workflow

- 1 Search Google Scholar for relevant papers
- 2 Save to Zotero with one click
- 3 Export .bib file for your LaTeX paper
- 4 Write review paper citing these references

LaTeX - Template System for 50 Papers

Why LaTeX for Volume

- Create templates - reuse for every paper
- Automatic bibliography (BibTeX) - no manual formatting
- Consistent formatting across many papers
- Free (Overleaf or TeXstudio)

Template Structure

```
paper_template.tex
├─ preamble.tex           (packages, commands)
├─ title.tex              (title, authors, abstract)
├─ introduction.tex
├─ literature_review.tex
├─ methodology.tex
├─ results.tex
├─ discussion.tex
├─ conclusion.tex
├─ references.bib         (from Zotero)
```

- Copy template folder for each new paper
- Modify content, keep structure
- Saves time per paper

AI Tools - Accelerate Writing to 50 Papers

Using AI for Volume

- **Literature review summaries:** AI summarizes many papers quickly
- **First draft generation:** Provide outline, AI writes draft
- **Editing and polishing:** Improve clarity and grammar
- **Reference formatting:** Ensure BibTeX is correct

Sample AI Prompt for Review Paper

Write a literature review on
"Machine Learning for Financial Stability"
including sections on: (1) anomaly detection,
(2) stress testing, (3) payment systems.
Cite numerous references.

Why GitHub for Research

- Version control for all papers
- Collaborate with co-authors without emailing files
- Public profile shows research activity
- Code and data can be shared

GitHub Workflow

- 1 Create repository for each paper
- 2 Push LaTeX code, figures, .bib file
- 3 Add co-authors as collaborators
- 4 Track changes (who wrote what)
- 5 Merge contributions automatically

50 Papers - Realistic Breakdown by Type

Target Mix for 50 Papers

Paper Type	Number	Citations Each
Review Papers	12	150-300
Original Research (Journals)	15	30-80
Conference Proceedings	15	10-30
Book Chapters	5	10-30
Communications	3	5-20
Total	50	1000-2000+

Sample Paper Topics - Financial Stability

Review Papers

- 1 "Machine Learning for Financial Stability: A Systematic Review"
- 2 "AI in Banking Supervision: Methods and Applications"
- 3 "Cryptocurrency Regulation: A Review of Global Approaches"
- 4 "Stress Testing Methodologies: Evolution and Future Directions"
- 5 "Payment Systems Security: Threats and Countermeasures"

Original Research Papers

- 1 "Detecting Anomalies in Real-Time Payment Systems Using Graph Neural Networks"
- 2 "Forecasting Bank Runs with Social Media Sentiment Analysis"
- 3 "Explainable AI for Anti-Money Laundering Compliance"
- 4 "Blockchain for Cross-Border Payments: Efficiency Analysis"
- 5 "Machine Learning for Credit Risk Assessment in Community Banks"

Sample Paper Topics - Workforce Development

Review Papers

- 1 "AI and Workforce Displacement: A Systematic Review of Retraining Programs"
- 2 "Digital Literacy Frameworks for Adult Learners"
- 3 "Online Learning Effectiveness for Workforce Training"
- 4 "Veteran Transition to Tech Careers: Best Practices"
- 5 "Community College Workforce Programs: Models and Outcomes"

Original Research Papers

- 1 "Evaluating AI Literacy Curriculum for Community College Students"
- 2 "Predicting Workforce Training Outcomes Using Machine Learning"
- 3 "Gamification for Digital Skills Training: Randomized Controlled Trial"
- 4 "Employer Perspectives on AI Credentials and Certifications"
- 5 "Economic Impact of Digital Upskilling Programs on Local Communities"

Sample Paper Topics - Cybersecurity

Review Papers

- 1 "AI for Cybersecurity: A Systematic Review of Detection Methods"
- 2 "Critical Infrastructure Protection: Frameworks and Gaps"
- 3 "Zero-Trust Architecture: Implementation Challenges and Solutions"
- 4 "Ransomware Trends and Defense Strategies"
- 5 "Supply Chain Cybersecurity: Risk Assessment Methodologies"

Original Research Papers

- 1 "Detecting Phishing Attacks Using Large Language Models"
- 2 "Anomaly Detection in Industrial Control Systems with Autoencoders"
- 3 "Federated Learning for Collaborative Threat Intelligence"
- 4 "Automated Vulnerability Assessment Using Graph Neural Networks"
- 5 "Privacy-Preserving Machine Learning for Healthcare Data"

Sample Paper Topics - AI in Government

Review Papers

- 1 "AI Governance Frameworks: A Comparative Analysis of Federal Agencies"
- 2 "Algorithmic Bias Assessment Methods for Government Systems"
- 3 "Explainable AI for Regulatory Compliance"
- 4 "AI Procurement Best Practices for Public Sector"
- 5 "Privacy-Preserving AI for Government Data Sharing"

Original Research Papers

- 1 "Automating FOIA Redaction Using NLP"
- 2 "AI for Regulatory Comment Analysis at Scale"
- 3 "Predictive Models for Government Program Outcomes"
- 4 "Chatbots for Citizen Service Delivery: Effectiveness Study"
- 5 "AI-Assisted Policy Impact Assessment: Case Studies"

Maximizing .gov Citations - Action Plan

Regular Actions for .gov Citations

- Check Regulations.gov for new RFIs in your area
- Submit comments to RFIs citing your own research
- Search for new .gov citations to your papers
- Email your SSRN/arXiv links to agency researchers

Agency Outreach Strategy

- 1 Identify researchers at Federal Reserve, BLS, ERIC, NIH
- 2 Find their email (agency websites, Google Scholar)
- 3 Send professional email sharing your relevant preprint
- 4 No requests, just sharing - they may cite if useful

Citation Tracking Dashboard

What to Track Regularly

Metric	How to Track
Total Google Scholar citations	Google Scholar profile
New citations	Google Scholar "Cited by" alerts
.gov citations	Google Scholar search: site:.gov "your name"
.edu citations	Google Scholar search: site:.edu "your name"
h-index	Google Scholar profile
Peer reviews completed	Web of Science / ORCID
Preprint downloads	arXiv/SSRN/OSF stats

Sample Tracking Sheet

Papers	Citations	.gov	.edu	Reviews
8	25	0	2	3
15	80	1	5	8
25	300	3	12	15
35	800	5	25	25
45	1500	7	40	35
50	2000	8	50	50

Mistakes That Kill Volume Strategy

- Only targeting top-tier journals (rejections waste time)
- Writing every paper alone (collaboration = more papers)
- Not using preprints (delays citations)
- Not tracking citations systematically (can't prove impact)
- Ignoring government alignment (misses .gov citations)

Mistakes to Avoid - Peer Review

- Declining all review invitations (misses recognition)
- Not registering on journal portals (no invitations)

Final Checklist - 50 Papers | 2000 Citations Ready

Publications Checklist

- ☐ 50 total publications (journals + conferences + chapters)
- ☐ 12-15 review papers (high citation generators)
- ☐ All papers uploaded to preprint servers

Citations Checklist

- ☐ 1000-2000+ Google Scholar citations
- ☐ .gov citations documented
- ☐ .edu citations documented
- ☐ Citation growth trend (upward)

Recognition Checklist

- ☐ Many peer reviews completed
- ☐ Web of Science reviewer profile
- ☐ Awards (conference best paper, outstanding reviewer)
- ☐ Book chapters

Profile Management Checklist

Conclusion - You Can Build This Profile

The Formula for 50 Papers & 2000 Citations

- 1 **Write review papers** (12-15) - each generates many citations
- 2 **Collaborate widely** - each collaborator adds multiple papers
- 3 **Use preprints** - citations start immediately
- 4 **Target government priorities** - .gov citations are gold
- 5 **Low-cost journals** - stay within budget
- 6 **AI-assisted writing** - accelerate to 50 papers
- 7 **Consistent effort** - consistency beats intensity

The Path Forward

- Build foundation with initial papers
- Momentum builds with more papers
- Exponential growth in citations

Final Word

Impact > Journal Name. Government Angle > Everything.
Volume creates citations. Citations create recognition.
Start today. One paper at a time. 50 papers.
