

AML/CFT Certification: Difficult Topics & Answer Strategies

Comprehensive Exam Preparation Guide

Compliance Professional Training

Updated: June 2026

Table of Contents

- 1 Core Themes
- 2 Transaction Monitoring
- 3 Private Banking Risks
- 4 PEP Risk Management
- 5 Prepaid Cards
- 6 Trade-Based Money Laundering
- 7 Synthetic Identity Fraud
- 8 Global AFC Standards
- 9 G20 & International Bodies
- 10 Egmont Group
- 11 Technology for AFC
- 12 AFC Regulations
- 13 Data Collection
- 14 Basel Institute
- 15 Key Takeaways
- 16 Summary

Core Themes Across All Exam Questions

5 Key Concepts You Must Master

- 1 **Risk-Based Approach** - Action proportional to risk level
- 2 **Documentation & Audit Trail** - Record every step
- 3 **Technology & Automation** - Systems require tuning
- 4 **International Standards** - FATF = Global baseline
- 5 **Beneficial Ownership** - Know ultimate controller

Exam Mindset

Ask yourself: *"What would a regulator expect?"*

Ask yourself: *"What would an auditor check?"*

Transaction Monitoring: The Process

Standard Alert Review Workflow

- 1 System triggers alert on transaction
- 2 Analyst reviews transaction patterns
- 3 Analyst gathers information from sources
- 4 Documents findings throughout investigation
- 5 Escalates if suspicious activity confirmed

Golden Rule

Never rely solely on automated systems - human judgment is essential!

Transaction Monitoring: Information Sources

The Question

While reviewing an alert, the analyst notes wire transfers to an unfamiliar entity in a sanctioned jurisdiction. The customer profile does not list dealings in that region. Which information source would most help the analyst understand the activity?

Wrong Answer:

- Regulatory advisories about common evasion techniques in that jurisdiction

right Correct Answer:

- Open-source research into the entity

Why?

Specific entity research > General guidance.

Understand WHO you're dealing with first.

Transaction Monitoring: Documentation Best Practices

The Question

Which of the following best practices support effective research documentation in suspicious activity investigations? (Select Two.)

Wrong:

- Documenting findings at the conclusion of an investigation

Correct:

- Using structured templates for investigative notes
- Adapting tools based on jurisdictional requirements

Key Takeaway

Document **throughout**, not just at end.
Use **structured templates** for consistency.

Transaction Monitoring: Frontline Escalation

The Question

A frontline staff receives a large, unusually timed cash deposit from a long-standing customer at a small bank branch. There is no immediate system alert. What is the most appropriate action?

Common Trap:

- Ignore because no system alert
- Wait for system to catch it

Correct Answer:

- Manually escalate a report to compliance

Why This Matters

Human judgment ; Automated systems

Unusual patterns below threshold still need review!

Private Banking: High-Risk Features

Question: High-Risk Features of Private Banking (Select Three)

Correct Answers:

- Minimum assets requirement
- Offering numbered accounts
- Dedicated relationship service with transaction discretion

Wrong Answers:

- Use of free-trade zones

Why These Are High-Risk

- **Minimum assets** - Attracts high-net-worth, complex structures
- **Numbered accounts** - Reduced transparency
- **Relationship discretion** - Potential to bypass controls

Why Private Banking is Vulnerable

- **Personalized relationship management** creates:
 - Pressure to maintain client relationships
 - Potential for "turning a blind eye"
 - Discretion that may hide activity
- **Offshore jurisdictions** complicate oversight
- **Complex structures** obscure beneficial ownership

Exam Tip

Questions about private banking = think about **discretion, opacity, and relationship pressure**.

Concentration Accounts: Expected Uses

Question: Typical and Expected Uses of Concentration Accounts (Select Two)

Wrong:

- Aggregating transactions from multiple unrelated customers

Correct:

- Streamlining inter-branch cash movements within the bank
- Facilitating back-office functions like suspense clearing

Understanding Concentration Accounts

- **Legitimate use:** Internal bank operations
- **Red flag:** Mixing customer funds
- **Key distinction:** Not for commingling unrelated customers

PEP Risk Management: Effective Measures

Question: Effective Measures for PEP Money Laundering Risks (Select Three)

Correct:

- Auto-detect public official occupations
- Capture source of funds/wealth at onboarding
- Conduct ongoing media monitoring for adverse news

Wrong:

- Implement processes to adjust transaction thresholds annually for all clients

PEP Risk Management Theory

Prevention + Detection + Ongoing Monitoring

Three Pillars of PEP Risk Management

- ① **Identification** - Auto-detect public official occupations
- ② **Assessment** - Capture source of funds and wealth
- ③ **Ongoing Monitoring** - Media screening throughout relationship

Common Trap

Don't confuse general controls with PEP-specific measures.

Annual threshold adjustments affect all clients - not targeted PEP risk management.

Prepaid Cards: Vulnerability to Financial Crime

Question: Why are prepaid cards particularly vulnerable?

Common Misconceptions:

- "They have built-in controls"
- "Limited value makes them low-risk"

Correct Answer:

- They can be used anonymously, especially when reloadable or unregistered

Why This Matters

- **Anonymity** = High ML/TF risk
- **Reloadable** = Can move significant value
- **Cross-border** = Jurisdictional challenges

Trade-Based Money Laundering (TBML)

Question: Which changes reduce TBML exposure? (Select Three)

Correct:

- Require digitized bills of lading for all high-value shipments
- Implement dual-person approval for customer invoice verification
- Increase transaction look-back periods in system audits

Wrong:

- Eliminate letters of credit from jurisdictions with weak AML controls

TBML Theory

Transparency + Verification + Review

Why These Measures Work

- **Digitized bills of lading:** Prevents document manipulation
- **Dual-person approval:** Segregation of duties
- **Look-back periods:** Pattern detection over time

Avoid This Trap

"Eliminate letters of credit from weak jurisdictions"

This is **too extreme** - risk-based approach doesn't mean blanket elimination.

Synthetic Identity Fraud: Corrective Action

The Question

A new credit product targeting low-income customers shows synthetic identity fraud trends. What is the most appropriate corrective action?

Trap:

- "Add more verification steps while keeping product active"
- "Increase marketing to offset losses"

Correct Answer:

- Suspend the product while updating risk assessment and onboarding controls

Why

Risk first, then business - address root cause before continuing.

FATF Recommendation 18

Question: Deficiencies in Recommendation 18 Implementation

A multinational institution is criticized for deficiencies in Recommendation 18 implementation. What should auditors have focused on?

Wrong:

- Training curriculum for non-AML business units

Correct:

- Whether group-wide AML programs apply to all branches and subsidiaries

Rec 18: Group-Wide AML Programs

FATF Requirement: AML programs must apply **globally** across all branches and subsidiaries.

FSRB vs FATF: Understanding the Difference

The Question

A compliance professional compares FATF and FSRB functions while tailoring AML program for a regional subsidiary. Which conclusion best reflects FSRB's role?

Wrong:

- "FSRBs are separate from FATF"
- "FSRBs set independent standards"

Correct Answer:

- FSRBs help implement and promote FATF standards by evaluating compliance in their regions

Key Relationship

FSRBs = Regional arms of FATF, not independent bodies.

FATF Immediate Outcome 5

Question: Beneficial Ownership Transparency Weakness

A country's high volume of legal arrangements relies on anonymous shell entities. National authorities struggle to trace beneficial ownership. Which FATF Immediate Outcome would be rated weak?

Correct Answer:

Immediate Outcome 5 - Legal persons and arrangements are not misused

Understanding IO5

IO5 measures: Whether countries prevent misuse of legal entities for money laundering.

Question: Why Choose the Basel AML Index?

A national enforcement agency prioritizing policy reform wants to identify vulnerable legal structures contributing to money laundering. Why choose the Basel AML Index?

Correct Answer:

It compiles vulnerability indicators across legal, political, and financial dimensions.

Understanding the Index

- **Comprehensive** - Multi-dimensional assessment
- **Comparable** - Cross-country benchmarking
- **Actionable** - Identifies specific vulnerabilities

Question: G20 ACWG Asset Recovery

Which G20 ACWG initiative most directly addresses recovering illicitly obtained funds across jurisdictions?

Wrong:

- Enhancing tax treaties for cross-border information exchange

Correct:

- Increasing efficiency of asset recovery measures

Direct vs. Indirect

Asset recovery is the direct mechanism for recovering funds.

IMF/World Bank Expectations

Question: Developing Country with Weaknesses

A developing country received World Bank funding but has ongoing weaknesses in terrorism financing controls and legislative gaps. What aligns with IMF/World Bank expectations?

Correct Answer:

Reform its AML/CFT frameworks and align them with international expectations

Key Principle

Funding conditional on compliance - AML/CFT reform is non-negotiable.

IMF Assessment: Economic Improvements vs Concerns

The Question

A nation achieved strong GDP growth and reduced inflation after IMF reforms. However, IMF's latest assessment still expresses significant concerns. Which explanation best reflects the IMF's approach?

Correct Answer:

Improvements in economic measures can mask financial crime vulnerabilities.

Understanding

Strong GDP not equal Strong AML/CFT - Macroeconomic health doesn't guarantee financial integrity.

IOSCO: Anti-Financial Crime Objectives

Question: IOSCO Objectives Supporting AFC (Select Two)

Wrong:

- Requiring all securities firms to maintain uniform compliance departments

Correct:

- Enhancing investor protection through cooperation and enforcement
- Promoting financial stability by managing systemic risks and facilitating international information exchange

Why

Cooperation + Information Exchange + Stability = Effective AFC in securities.

Egmont Group Membership Benefits

Question: Benefits of Egmont Group Membership (Select Two)

Wrong:

- Automatic inclusion in FATF mutual evaluations

Correct:

- Access to secure portal for communication with peer FIUs
- Increased capacity through shared typology projects and analyses

Key Takeaway

Membership not equal Automatic evaluation inclusion

Membership = Information sharing capacity

AI-Based Screening: Addressing Inconsistencies

Question: AI Screening System Inconsistencies

Internal audit reveals AI-based screening system is rejecting transactions inconsistently across business units. Best first step for corrective action?

Correct Answer:

Engage the governance committee to assess model performance

Why This Approach

- Governance oversight is essential for AI systems
- Need centralized assessment of model performance
- Inconsistency suggests model governance gap

False Positives: Impact and Solution

Question: High False Positives in Payment Screening

A payment screening system returns high false positives. What is likely impact and how should it be addressed?

Wrong:

- "Reduce list matching criteria to minimize alerts"

Correct:

- It may cause screening fatigue; tuning scenario logic or data inputs would help

The Theory

More alerts not equal Better compliance

Tuning not equal Reducing controls

Question: Device Intelligence Elements (Select Three)

Wrong:

- Social media accounts and browsing history

Correct:

- Browser type and screen resolution
- IP address and geolocation
- Operating system and installed plugins

Device Intelligence vs. Social Media

Device intelligence = Technical device fingerprinting

Not = Social media monitoring

Adverse Media Checks: Why Automate?

Question: Why Use Automated Systems for Adverse Media?

Correct Answer:

Because they improve efficiency in identifying negative news across multiple sources.

The Logic

- Manual review = Limited scope
- Automated = Multiple sources simultaneously
- Efficiency = More complete coverage

Automated Systems: Incorrect Usage

Question: Bank's Automated Systems Not Used Correctly

A mid-tier bank notices customer transactions flagged as fraudulent. After examination, determined automated systems are not being used correctly. What is most likely cause?

Correct Answer:

The bank's automated systems are not being configured to flag transactions that are flagged as fraudulent.

Understanding

Systems need proper configuration - Not just implementation, but ongoing tuning.

AI Governance: Regional Variations

Question: Regulatory Features of AI Governance (Select Three)

Wrong:

- Central AI ethics boards with veto power

Correct:

- Specific AI use-case restrictions
- Requirements for human-in-the-loop oversight
- Differing standards for transparency and data usage

Regional Variations

Different jurisdictions = Different AI governance approaches

Question: Major Advantage of ML Algorithms in UAE AML

Wrong:

- "They automate product development decisions"

Correct:

- They improve customer risk assessments by identifying transaction anomalies

Core Purpose of ML in AML

Detection, not automation of business decisions

ESG-Aligned Compliance Requirements

Question: ESG Reporting Examples (Select Three)

Wrong:

- Monitoring account login patterns
- Conducting algorithmic risk assessments

Correct:

- Publishing carbon emissions by facility
- Reporting executive salary data across genders
- Reporting supply chain labor standards

Understanding ESG

ESG = Environmental, Social, Governance

Not traditional AML transaction monitoring

EU AML Directive Alignment

Question: Aligning with Latest EU AML Directive

European bank wants to align with latest EU AML Directive. What is most effective strategy?

Wrong:

- Apply FATF guidance uniformly across all non-EU jurisdictions

Correct:

- Incorporate recommendations from AML regulation updates post-2008 financial crisis

Key Point

EU-specific developments matter more than generic FATF guidance.

External Sources for Sanctions Screening

Question: External Sources for Sanctions Screening (Select Two)

Correct:

Wrong:

- Watchlists developed from the firm's previous investigations
- FATF blacklists and UN Security Council lists
- State Department embargo registries

External vs Internal

External = Government/regulatory lists

Internal = Proprietary watchlists

Data Lineage: Transparency and Auditability

Question: Support Transparency through Data Lineage (Select Two)

Wrong:

- Archiving analyst notes from alert reviews

Correct:

- Maintaining history of data transformations
- Capturing source of each data field

Data Lineage Definition

Knowing where data comes from and what happens to it.

Question: Basel Institute Services for Anti-Corruption

NGO developing anti-corruption mechanisms in country with weak legal infrastructure. Which Basel Institute services provide most strategic support?

Wrong:

- Public finance management technical assistance with standardized compliance templates

Correct:

- ICAR legal advisory services combined with capacity building programs

Why

Legal advice + Capacity building = Sustainable reform

Internal vs External Data Sources

Question: Internal vs External Source Characteristics (Select Two)

Correct Answer:

- Internal sources reflect observed customer behavior or system-held values
- External sources include sanction or adverse media lists from agencies

Key Distinction

Internal = What we know about our customers

External = What regulators/agencies tell us

BCBS Guidance on PEP Escalation

Question: Frontline Staff Unsure About PEP Escalation

During regulatory review, bank discovers frontline staff are unsure when to escalate alerts involving PEPs. Based on BCBS guidance, what is most effective corrective action?

Correct Answer:

Reinforce risk-based escalation protocols and provide KYC training

BCBS Focus

Training + Clear Protocols = Effective PEP management

History of AML in Europe

Question: European Bank EU AML Directive Alignment

European bank wants to align with latest EU AML Directive. Given the history of AML in Europe, what is most effective strategy?

Correct Answer:

Incorporate recommendations from AML regulation updates post-2008 financial crisis

Historical Context

Post-2008 = Major regulatory evolution period

Data Breach Investigation

Question: Suspicious KYC File Access

AML compliance officer reviewing system logs after suspected breach shows repeated access to KYC files outside regular business hours by administrative account. Most appropriate next step?

Correct Answer:

Investigate the account's activity and suspend its privileges during the review

Incident Response

Isolate + Investigate - Standard security protocol

Key Takeaways: Answer Strategy

How to Identify Correct Answers

- ① **Specificity** - Prefer specific over general answers
- ② **Action-Oriented** - Look for concrete actions, not vague concepts
- ③ **Risk-Based** - Choose proportional, risk-based responses
- ④ **Documentation** - Always document, always have audit trail
- ⑤ **International Standards** - FATF = Default reference point

Common Exam Traps to Avoid

Most Frequent Mistakes

- **Over-reliance on automation** - Systems need human oversight
- **Extreme measures** - "Eliminate all" is rarely correct
- **Confusing internal/external** - Know which sources are which
- **General vs specific** - Specific answers usually win
- **Documentation timing** - Record throughout, not just at end

Applying Theory to Questions

When in Doubt, Ask:

- **What's the risk?** - Identify actual risk factor
- **What would a regulator expect?** - Regulator perspective
- **What creates an audit trail?** - Documentation focus
- **What's proportional?** - Risk-based approach
- **What does FATF say?** - International standard

Practical Tips for Exam Success

Before Answering

- Read carefully
- Identify key facts
- Note what's missing
- Eliminate extremes

While Answering

- Prefer specific answers
- Look for action verbs
- Consider auditability
- Apply risk-based logic

Final Summary

Master These Concepts

- **Transaction Monitoring** - Human + Automated oversight
- **Private Banking** - Discretion and relationship pressure
- **PEP Management** - Identification + Assessment + Monitoring
- **FATF Framework** - IO5, Rec 18, FSRB roles
- **Technology** - AI governance, false positive management
- **Data** - Lineage, internal/external sources

Remember

Think like a compliance professional: *"What would I do in this situation?"*

Good Luck!

Stay Calm. Think Risk-Based. Apply Theory.

You've got this!
