

LaTeX Document Workflow Management

Error Resolution & Code Conversion, QA and AI Controls

Team

August 13, 2026

① Identify Latest Version

- Check Git repository: develop vs master branch
- Determine which is most recent

② Convert latex from doc Working Version

- Table errors detected
- Roll back to older stable code

③ Convert Word Document

- Transform .docx to $\text{\LaTeX}$ format

Attachments

- Enterprise $\text{\LaTeX}$ Git code lacks attachment support
- Move attachments to SharePoint folders
- Update references accordingly

Visual Matching

- Visual consistency is critical
- Match output appearance precisely
- "Eyes are important"

Content & Technical Elements

Document Types

Two document types: Monitoring Document & Mode Document

Issues to Fix

- Math equations
- Footnotes
- Chart numbering

Version Control

- Network drive stores doc versions
- Git repo contains $\text{\LaTeX}$ code
- Wiki remains central reference

Using Copilot

- Extensively used for acceleration
- Assists with code fixes
- Expands content as needed

Cross-Referencing

- Always verify against wiki
- Check network drive
- Maintain version control discipline

Summary Checklist

Task	Status
Check Git branches (develop/master)	☐
Convert from doc $\text{\LaTeX}$ version	☐
Convert Word to $\text{\LaTeX}$	☐
Move attachments to SharePoint	☐
Fix math equations	☐
Fix footnotes	☐
Fix chart numbering	☐
Match visual output	☐
Cross-reference wiki & network drive	☐
Use Copilot for expansion	☐
